## Improving heart health across the Armed Forces Community through research and collaboration

### ABOUT OUR COLLABORATIVE

The Armed Forces Cardiovascular Collaborative (AFCC) is a new initiative to bring together researchers, clinicians, and people from the Armed Forces community to improve heart health.

This includes sharing experiences, ideas and learning through regular online and in-person engagement sessions.

### OUR AIM

To identify priorities, highlight unmet needs, and drive forward research and clinical improvements that enhance cardiovascular care for service personnel, veterans and forces families across the UK.

### WHO CAN TAKE PART

Anyone with **professional** or **lived experience** relevant to the Armed Forces and/or cardiovascular health.

### WHY PARTICIPATE

- Help uncover gaps in understanding of heart health in the Armed Forces Community;
- Share your lived experiences to highlight issues that may be overlooked;
- Improve understanding of how service life affects heart health and access to care;
- Shape future research by influencing the questions and priorities that matter most.
